

26. Environment Policy

We recognise that we must achieve our business objectives in a manner that reflects the changing environmental priorities of our Clients and society. To develop our business, both products and services, including the manner of delivery, we will be guided by environmental impact criteria. Accordingly, we will make this policy available to the public, provide a copy to interested parties and:

1. Comply with UK legislation, or the countries within which they will operate.
This will include the sustainable use of natural resources and protection of the environment.
2. Work proactively and stimulate our clients, suppliers, employees, associates and trainers to conserve the natural environment.
3. Implement processes and controls to minimise environmental problems.
4. Progressively reduce waste, particularly proper waste.
5. Procure materials and equipment that are environmentally friendly and more energy efficient than those they replace.
6. Reduce power and fuel consumption.
7. Utilise public transport where feasible.
8. Provide Vocational Operator Safety and support for our staff to ensure our commitments are achieved.
9. Establish and monitor our targets for environmental protection.
10. Continually improve our environmental performance.
